

Cue series.

Monitoring that meets the high demands of a DJ

- # Tight Bass by using MultiBass speakers with basreflex technique
- # Control the volume of the in-ear monitor and cue without being bothered by the main speakers
- # Endless possibilities in Looks & Sound

With in-ears you have full control over the loudness of both the monitor as the cue without being bothered by the main speakers. You are no longer dependent on the setup and quality of monitoring in the booth. Usually the monitor speakers are playing extremely loud to be somewhat audible above the violence of the main speakers. By monitoring via your in-ears you are protected from all this violence.

Cue 1

	Cue 1	
Protection	✓	
Fit	✓
