

Warranty conditions

Check www.ears4u.nl/garantiebepaling for more information and the full warranty conditions.

Production errors, breakage of the external shell and failure of the internal components are covered for a period of two years from the date of purchase. Damage or breakage caused by use contrary to the operating instructions by ears4U, normal wear and tear, incorrect use, negligence, unauthorized repair and the replaceable cable are not covered by warranty.

Sound volume warning

Geluidsniveau in dB						
80 dB	83 dB	86 dB	89 dB	92 dB	100 dB	110 dB
8 uur	4 uur	2 uur	1 uur	30 min	5 min	direct
Maximale blootstelling in tijd						

Be sure to read all warnings and instructions before using the ears4U monitors. Always turn down the volume on your device before inserting the ears4U monitors in your ears. Once the in-ear monitors are inserted you can gradually increase the volume to an average sound level. The use of monitors at high volume can permanently damage your hearing. When a ringing or other discomfort occurs in your ears, it's a sign that the music volume is too high. Read the following guidelines for the maximum time exposure to sound pressure levels before hearing damage occurs.

Custom in-ear monitors

Congratulations on the purchase of your ears4U custom in-ear monitors. You can comfortably enjoy the perfect sound quality.

Because of the high quality balanced technique, the smallest details are audible and the various instruments well definable.

To ensure optimal sound quality, it is recommended that you regularly check your ears for blockages by consulting your doctor. Also the in-ear monitors need some maintenance. You can read more about maintainace inside this userguide

USERGUIDE
Custom in-ear monitors

Inserting in the ear.

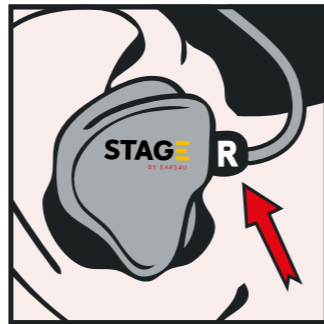

The in-ear monitors feature color coding: red for right and blue for left. Place the in-ear monitors with the sound openings in your ear canal and the cord straight forward. Through a rotation backwards you can slide the in-ear monitors correctly in the ear.

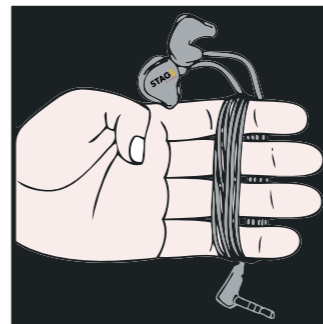

Check that the in-ear monitors also fit well at the top of the ear by pulling the top of the ear upwards. If the monitors inserted correctly it gives a comfortable feeling. The cord can be bent tightly over the ear. If the in-ear monitors are not comfortable or after some time you start getting pain, please contact info@ears4u.nl.

Cable

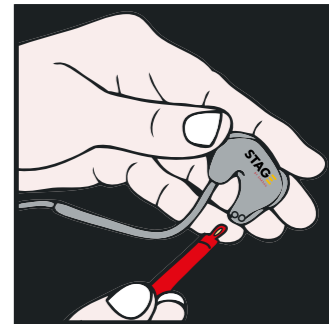

When reconnecting the cables to the in-ear monitors you need to ensure that the cables are properly connected. On the connectors on the cables are letter markings. These should match the monitor side.

Storage

To make sure that the in-ear monitors remain undamaged, it is advisable to store them in the supplied storage box after use. Wrap the cord around your hand starting from the jack plug and put it in the storage box.

Maintenance

Regularly check that the sound openings of the in-ear monitors are free from pollution and ear wax. Any blockage can be removed using the provided bracket. The in-ear monitors have an antibacterial lacquering and can be cleaned with a damp cloth and possibly alcohol.
